SUMMARY

SDET and QA Automation Engineer with 3+ years in software engineering, specialized in API, integration, and end-to-end (E2E) test automation in Java for large-scale financial systems, including a project in partnership with Brazil's Central Bank (Banco Central do Brasil). Experience delivering automated suites across every layer with Rest Assured, Spring Test, Cypress with Cucumber, Selenium, and Appium, running in GitLab CI/CD pipelines with Allure reporting, and applying Shift-Left and BDD practices so quality is built in from day one. Backend developer background (Spring Boot, MongoDB, MySQL), AI-assisted QA with critical review of every output, intern mentoring, and remote collaboration with a U.S. team. ISTQB CTFL certified. Based in Brazil (UTC-3), fluent in English (C1), with solid overlap with U.S. and European business hours.

SKILLS

API & backend automation: Java, Rest Assured, Spring Test (contract, component, and integration), JUnit, TestNG, WireMock
UI & E2E automation: Cypress with Cucumber, Selenium (Selenide, Selenium Grid), Playwright
Mobile & performance: Appium with BrowserStack, JMeter
BDD & test strategy: Gherkin, Shift-Left, risk-based testing, test plans, manual and functional testing
APIs & data: REST, GraphQL, Postman, Jest, SQL (MySQL, PostgreSQL), MongoDB
CI/CD & management: GitLab CI/CD, GitHub Actions, Allure Report, Jira, Confluence, Zephyr Scale, Agile / Scrum
Backend: Spring Boot, Quarkus, microservices, Clean Architecture
AI-assisted QA: AI assistants for scenarios, test data, and boilerplate, validated against requirements

EXPERIENCE

Quality Analyst (QA Automation / SDET) — iLAB
Sep 2025 – Present · Remote

- Quality engineering for large-scale financial data systems in a project delivered in partnership with Brazil's Central Bank (Banco Central do Brasil).
- Design, develop, and maintain automated test suites across the full stack: Spring Test and Rest Assured for backend contract, component, and integration tests; Cypress with Cucumber for UI and component tests; Selenium for E2E flows; and JUnit for unit tests, ensuring the reliability of critical financial data processes.
- Author and validate BDD scenarios in Gherkin together with business and engineering, aligning acceptance criteria and reducing requirement ambiguity before implementation starts.
- Analyze CI/CD pipeline results to identify root causes of failures, run manual tests when needed, and report and triage defects in Jira, improving release predictability.
- Integrate Allure Report into the automated suites and track quality metrics (defect criticality and priority, test execution volume, defects found), giving stakeholders reports they can easily interpret.
- Use AI assistants to accelerate Gherkin scenario drafting, test data preparation, and boilerplate code, validating every output against requirements and project conventions before adoption.
- Delegate tasks to interns and review their deliverables, mentoring them on test design, BDD, and automation best practices; take part in all Agile ceremonies with a Shift-Left mindset.

QA Automation Engineer (Part-time Contract) — U.S.-Based Rental Platform
Jun 2024 – Dec 2025 · Remote

- Remote engagement with a U.S.-based house and apartment rental platform, working in English alongside the U.S. engineering team.
- Designed and automated integration tests with Jest covering GraphQL queries and mutations on Node.js APIs, validating responses and data consistency across the platform's core services.
- Safeguarded data integrity and the reliability of core rental workflows at the API layer, helping the team catch regressions before they reached users.
- Structured test scenarios in Gherkin and communicated results and defects asynchronously across time zones, keeping expected behavior clear and shared with developers.

QA Tester (Test Automation) — Grupo Txai
Mar 2025 – Sep 2025 · Remote

- Joined the project from its early stages, applying a Shift-Left approach to bring quality into development and catch issues before they grew.

- Automated UI tests with Java and Selenium and API tests with Rest Assured, building maintainable suites for the project's critical flows.
- Created structured test cycles and BDD scenarios in Gherkin, using risk-based prioritization to focus coverage where failures would have the highest impact.
- Implemented a GitLab CI/CD pipeline that runs the automated tests, generates Allure reports, and sends automated notifications, giving the team feedback on every run.

Quality Analyst — DBC Company (promoted from QA Intern) Jun 2024 – Feb 2025 · Brazil

- Selected for DBC's "Vem Ser" program, an intensive track in software quality and test automation (Java, Rest Assured, Selenium, Cypress, BDD, CI/CD), and hired as Quality Analyst at the end of the program.
- Developed automated tests for REST APIs with Rest Assured, JUnit, and TestNG, and for web UI with Selenium (Selenide, Selenium Grid) and Cypress, including unit tests where needed.
- Automated mobile tests with Appium on BrowserStack and ran functional and performance tests across web, API, and mobile, using JMeter for load scenarios and WireMock to simulate external services.
- Wrote test plans and Gherkin scenarios following BDD practices, and managed test cases, execution, and traceability with Jira, Confluence, and Zephyr Scale, with GitLab CI/CD and Allure running them continuously.
- Took part in the DBC Hackathon, collaborating with a multidisciplinary team to deliver a working solution under a tight deadline.

EARLIER EXPERIENCE

Junior Developer — NUTES, UEPB (EMBRAPII unit) (Jun 2022 – Mar 2023)
Developed mobile features in Java and Kotlin for healthcare solutions and worked on Spring Boot and MongoDB backend services that supported the mobile apps, in an R&D environment. This development background is the foundation of the SDET profile: understanding how the systems under test are built, from backend to mobile client.

Teaching Assistant, Object-Oriented Programming (Java) — Unifacisa (Nov 2022 – Feb 2023)
Supported students in core OOP concepts and helped debug and review Java code in lab sessions.

Backend Developer — Food Delivery System (Personal Project) (2022 – 2023)
REST API with Spring Boot, MySQL, Flyway, and API Gateway covering restaurants, menus, and order tracking.

EDUCATION

B.Sc. in Information Systems — Unifacisa, Campina Grande, PB (expected 2027)

CERTIFICATIONS

- ISTQB CTFL — Certified Tester Foundation Level
- AWS Cloud Quest: Cloud Practitioner (Aug 2025, credential ID bd832852-18a7-4223-83f8-40a67cccb645) and Generative AI Practitioner (Nov 2025)
- Tricentis Tosca in the Cloud Smart Start — Tricentis (Mar 2026)
- Mobile Testing with Appium and Java — Test Automation University (credential ID 295f5b86)
- Scrum Fundamentals Certified — SCRUMstudy
